## Mouse Buttons

Clicking on an atom identifies that atom in the command window. Moving the mouse whilst holding mouse buttons and/or control keys manipulates the molecule. The default bindings are described below.

| Mac        | Windows      | Action            |
|------------|--------------|-------------------|
| ---        | Left         | Rotate X-Y        |
| Command    | Right        | Translate X-Y     |
| Shift      | Shift-Left   | Zoom              |
| Shift-Cmnd | Shift-Right  | Rotate Z          |
| Control    | Control-Left | Z-Clipping (Slab) |
